(a) circuit D, frame IIXII: syndrome distribution
ideal
WK_C180
probability P(s)
a1 relaxation: s = 8
injected X2: s = 12
syndrome s
(b) post-selected branch fidelity F12
ideal
WK_C180 (44/55 shots)
0.800 [0.676, 0.884]
correct recovery
0.200 [0.116, 0.324]
logical error
probability given s = 12
data = 00000
data ≠ 00000
(c) circuit C, frame IIIII: identity branch
ideal
WK_C180
probability P(s)
syndrome s
(d) mid-circuit vs late measurement
ideal
WK_C180
probability of expected bitstring
0.000
0.000
0.024
0.119
A mid s=0
B mid s=12
C late s=0
D late s=12
